

## Back to the Basics:

# Breaking Down Data Concepts for Human Services Agencies

Nonprofits are collecting data, but they're not always making the most out of it.

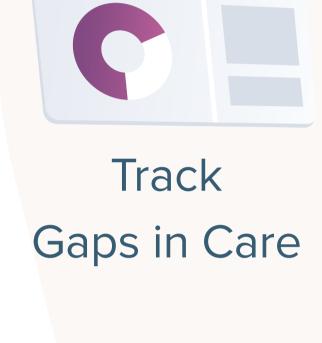

# But First, Where Does Your Data Live? Your data should live in an ecosystem of secure healthcare technology.

# What Can Data Analysis and Visualization Do For You?

### Behavioral health agencies are going beyond reporting, taking advantage of a new world of tools to understand their data. **Data Warehouse**

Advanced Data Tools

Stores a large amount of organized data, accumulated from one or multiple sources.

## and mined for deeper understanding.

Provides a single source of truth. From your

warehouse, data can be exchanged, analyzed,

Stores a large amount of data from multiple sources. Data tends to be in a raw format, requiring technical expertise to extract.

#### How is it used? Provides the data for research or

social science initiatives.

**Data Lake** 

How is it used?

**Data Modeling** 

data entities, their attributes, and the

relationships between entities.

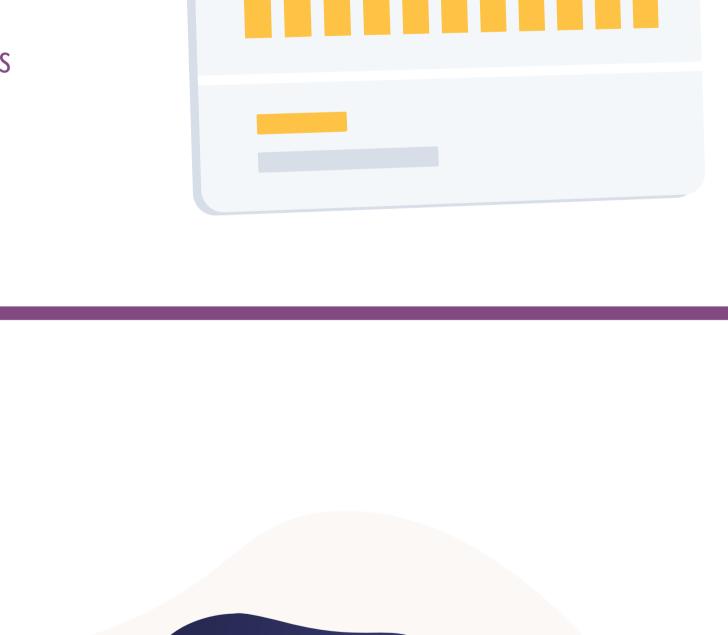

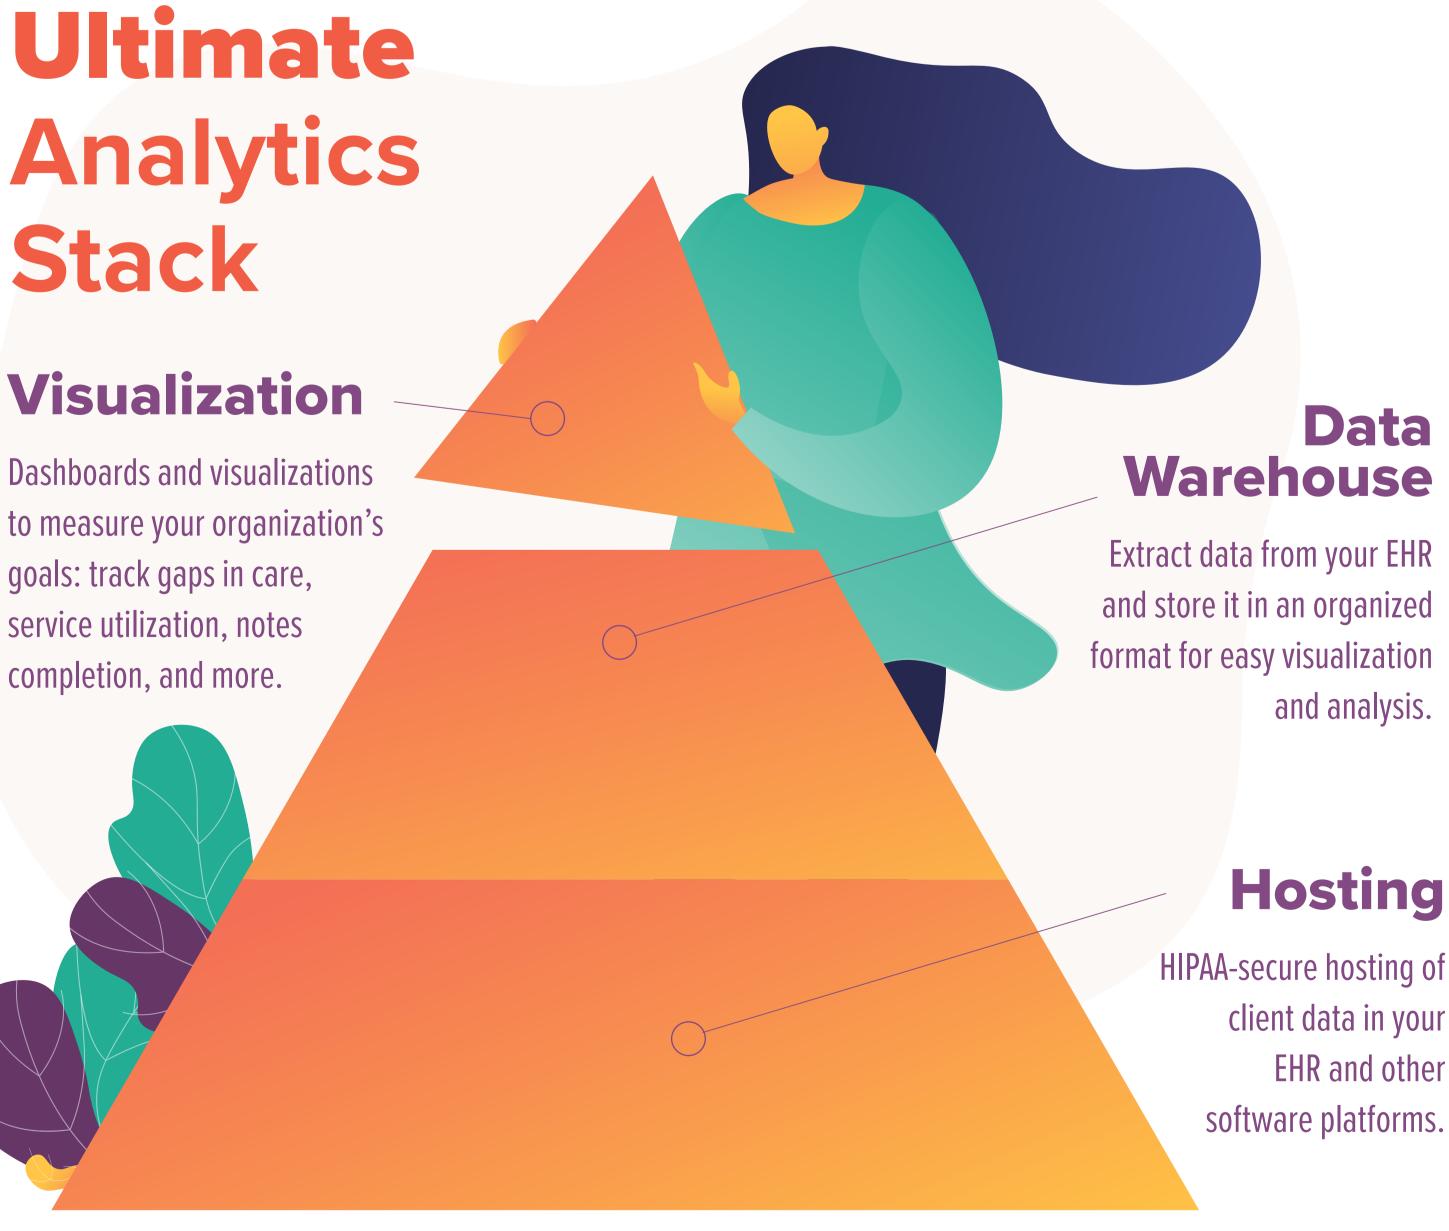

#### How is it used? Organizes information to serve business

The

elements used to process, store, and manage the data.

### **Data Visualization** Presents data in a user-friendly way with interactive graphs, charts, and other visual aids. How is it used? Makes data approachable and enables designers to solve business problems dynamically by creating dashboards.

### How to Build Data Culture To get the most out of their data,

agencies need to build a data-driven culture.
